

# Optometric Referrals in South-East London

# Preface

This guidance summarises how to complete your optometric referrals if you are based in South-East London and is current as of Jan 2025. Any changes to the service thereafter will be indicated with updates and amendments via email.

To ensure that you are kept informed of any updates, please keep POS apprised of your contact details. It is recommended that all updates are tracked and kept with this guidance.

We hope that this information is useful to you.

Where possible all routine referrals for patients with **LSL/BBG GP**s are processed through eRS.

# MECS/eRS practices

Choose: ROUTINE – Ophthalmology – Clinic Choice – SEL MECS triage Attach your referral and associated documents, specifying clinic and HES preference

Note: this process will change to direct clinic pathway following practice approval on completing all governance checks

# Non-MECS/eRS practices

Send your referral and associated documents via email to :

- Lambeth GP patients: <u>lamccg.ophthalmologyspor@nhs.net</u>
- Southwark GP patients: <u>souccg.ophthalmologyspor@nhs.net</u>
- Lewisham GP patients: <u>lewccg.mecs@nhs.net</u>
- Bexley GP patients: <u>bexccg.ophthalmologyspo@nhs.net</u>
- Bromley GP patients: <u>broccg.bbgspa@nhs.net</u>
- Greenwich GP patients: <a href="https://www.ich.mecs@nhs.net">lch.greenwich.mecs@nhs.net</a>

Please state that it is a Routine Referral, attach all relevant documents and highlight your clinic and HES preference.

Note:

- If documents are missing, you may be contacted to supply the relevant attachments
- if further clarification or information is required, your patient may be directed to a MECS practice first

# NON-LSL/BBG GP registered patients

Send your referral and associated documents to the patient's GP.

Please state that it is a Routine Referral and highlighting your clinic and HES preference.

Section 5: Referral Checklist

For a smooth patient journey to HES, please ensure your referral contains the following info:

- Px details: Name, NHS number, DoB, Address, Contact details, Accessibility needs
- Px's GP details: Practice Name, Address & Contact details
- Referrer details: Name, GOC number, Practice Name, Address & Contact details
- Referral Summary: Date, Reason for referral, Urgency, Clinic, HES preference

#### **Clinical Information**

#### For All Referrals

- □ V and/or VA; pinhole (if VA is poor)
- Current spectacles/refraction
- □ Previous ocular history
- General health including meds & allergies
- Explanation of your concern

#### + Cataract specific, then include:

- D Previous Rx & VA (if available) highlighting any notable Rx shift
- □ Symptoms/QoL impact
- Dilated fundoscopy findings
- □ Refractive aims
- □ Clarification that Px understands risks & benefits, guarded prognosis if applicable, need to cease CL wear before assessment and is aware of wait times

#### + Glaucoma specific, then include

- □ AC angle (Van Herick, Gonioscopy &/or AS OCT)
- □ IOP using applanation tonometry
- □ Disc assessment including CD ratio
- □ Standard automated perimetry findings (attach VF plots)
- □ Information regarding risk factors
- □ You may choose to attach disc images/OCT scans if available

#### + Macular specific, then include

- □ Symptoms
- □ Amsler findings
- Description of the macular
- □ Images/OCT scans

#### + Suspect neuro-ophthalmology specific, then include

- □ Symptoms
- Pupils assessment findings
- □ Monocular colour vision findings & Red desaturation findings
- OMB/motility findings
- □ VF findings (attach plots if available)
- Disc assessment including CD ratio and description
- □ You may choose to attach disc images/OCT scans if available

#### FINAL CHECKLIST

- Are the details correct?
- Is referral required?
- Is the reason for referral clearly evidenced and identified
- Has all the relevant evidence been provided?
- Have you attached all the necessary attachments
- Have you outlined the level of urgency, clinic sub-speciality and px's HES preference.

## LOOK

## Red Eye:

<u>Adnexal:</u> trichiasis, distichiasis, floppy eyelid, entropion, ectropion, lagophthalmos, blepharitis, dacryocystitis <u>Conjunctival:</u> infective, allergic, subjconj haem, pingueculitis, SLK, GPC, conj FB, symblepharon, conj neoplasia <u>Corneal:</u> infective, inflammatory, CL-related, corneal FB, recurrent erosion, pterygium,

<u>Other:</u> trauma, post-op, dry eyes, endophthalmitis, uveitis, episcleritis, scleritis, pharmacological, AAC, carotid-cavernous fistula, cluster headache

#### Tearing in adults:

*Painful:* corneal issue, ant uveitis, lash/lid disorder, conj FB, dacryocystitis/adenitis; canaliculitis, trauma *Painless:* dry eyes, blepharitis, viral conjunctivitis

#### SEE

Transient Visual Loss: Ocular surface disease, amaurosis fugax, migraine, impending CRVO, ION, OIS

#### Persistent Visual Loss:

<u>Sudden, painless:</u> RAO, RVO, GCA, vitreous haemorrhage, RD, optic neuritis, stroke, toxic retinopathy <u>Gradual, painless:</u> cataracts, refractive error, chronic OAG, ACG, retinal disease, corneal disease, <u>Painful:</u> trauma, AAC, optic neuritis, uveitis, endophthalmitis, corneal hydrops

Distortion Vision: Refractive error, acquired astigmatism, corneal disease, macular disease, RD, hypotony

#### Diplopia:

<u>Monocular</u>: Rx error, spec alignment, corneal opacity/irregularity, cataracts, iris defects, dislocated lens/IOL <u>Intermittent Binocular</u>: phoria decompensation, myasthenia gravis

Constant Binocular: III, IV, VI palsies, orbital disease, post-ocular surgery/trauma, internuclear ophthalmoplegia

Glare: astigmatic error, cataract, PCO, corneal irregularity, altered pupil/iris structure

Hallucinations: PVD, RD, optic neuropathies, Charles Bonnet, psychosis, medications

Haloes: cataract, PCO, AAC, corneal oedema, PDS,

**<u>Flashes:</u>** PVD, Retinal break, RD, rapid eye movements, migraine, oculo-digital stimulation, retinitis/uveitis, drug-related, hallucinations, iatrogenic post-laser photocoagulation

Floaters: migraine, PVD, uveitis, vitreous haemorrhage or condensations, hyphema, retinal break, RD, FB

#### FEEL

Light Sensitive: corneal abnormality, anterior uveitis, conjunctivitis, scleritis, mydriasis, congenital glaucoma, migraine, retrobulbar optic neuritis, subarachnoid haem, trigeminal neuralgia, light coloured iris

Pain: (do not forget possibility of transferred pain)

<u>Ocular Mild-moderate</u>: dry eyes, blepharitis, infective conjunctivitis, episcleritis, pingueculitis, SLK, medication toxicity, CL related, eye strain

Ocular Moderate-severe: corneal disorder, anterior uveitis, scleritis, endophthalmitis, AAC

Periorbital: trauma, hordeolum, pre-septal cellulitis, GCA, referred pain (dental or sinus)

Orbital: sinusitis, trauma, orbital cellulitis, optic neuritis, migraine or cluster headache, herpetic neuralgia,

Itchy: allergic conjunctivitis, blepharitis, topical drug allergy, contact dermatitis, GPC

# Section 8: Update Tracker

To assist with keeping up with the latest information, you may choose to list the updates in the following tables.

|      | GENERAL |
|------|---------|
| Date | Update  |
|      |         |
|      |         |
|      |         |
|      |         |
|      |         |
|      |         |
|      |         |
|      |         |

|      | EMERGENCY |  |  |  |
|------|-----------|--|--|--|
| Date | Update    |  |  |  |
